How to Set Up Your Workspace in Under 5 Minutes

Setting up your private operating environment is fast and seamless. Follow these three steps to duplicate the core master templates into your own Google Drive:

1. **Open Your Chosen Asset:** Click any of the official access links on Page 1 (such as the Google Docs Vault or Google Slides Deck) to launch the interactive template preview screen in your browser.
2. **Clone to Your Drive:** Locate and click the blue **"Use Template"** button positioned in the top-right corner of the page preview window.
3. **Begin Customizing:** Google Drive will automatically generate a private, fully editable copy inside your personal account. You can now edit, customize, and execute immediately!

Troubleshooting Tip — Seeing "View Only"?

Never request edit access! If you do not see the blue button, simply open the file, navigate to the top left menu, and click **File → Make a copy**. This instantly creates your own private, editable copy in your Google Drive.
